

## DDR4 SO-DIMM

## Assured Quality, Fast Speed, High Performance

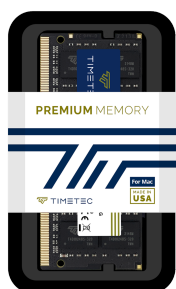

Timetec DDR4 module is optimized for the latest DDR4 systems and offers higher frequencies, greater bandwidth, and lower power consumption than DDR3 modules. It's compatibility-tested across DDR4 systems for reliably fast performance.

## Main Feature

- Speeds start at 2133MHz
- Low 1.2V DDR4 standard voltage for cool and efficiency
- Black PCB design
- Optimized for the latest Intel and AMD CPUs
- Easy plug-and-play installation
- Faster speeds and responsiveness

## Specifications

|                         |                       |           |           |           |
|-------------------------|-----------------------|-----------|-----------|-----------|
| Type                    | Notebook              |           |           |           |
| Module Type             | 260 Pin SO-DIMM       |           |           |           |
| Dram Config             | 512x8, 1024x8, 2048x8 |           |           |           |
| Frequency               | 2133MHz               | 2400MHz   | 2666MHz   | 3200MHz   |
| Data Transfer Bandwidth | PC4-17000             | PC4-19200 | PC4-21300 | PC4-25600 |
| Latency                 | CL15                  | CL17      | CL19      | CL22      |
| Voltage                 | 1.2V                  |           |           |           |
| Warranty                | Lifetime Warranty     |           |           |           |

## Order Information
